QOLARIS DATA INDIA PRIVATE LIMITED

STRICTLY PRIVATE AND CONFIDENTIAL

Qolaris
Unifying Thoughts

About The Company

Qolaris Data India Private Limited has been established with the objective of helping organizations marry their business goals with their digital needs and navigate through their **digital transformation** journey through consulting and implementation services.

Qolaris has been formed in 2019 by a group of business strategists and technology experts, we aid organizations

- to achieve their business goals through market exploration resulting new client augmentation,
- to realize the value in adopting the emerging technology trends through our cumulative experience on various aspects of digital transformation for governments and enterprises.

We aspire to be one of the premier digital solution delivery companies in the country by **2025**, partnering with governments and enterprises in India and abroad with our niche software service delivery skill-base and our native suite of digital product offerings.

Vision

2025

Companies have already realised that to be relevant, they need to think fast and to stay agile. This requires strategies that work in the real world. We have established a network of professionals across domains and technologies who can create holistic views for the stakeholders by defining and answering their most strategic business questions on topics like growth, profitability, technology-driven transformation, business process reengineering, operating models, and sustainability.

Our skilled consultants work on customised schedules, engagement and constraints of our clients. Our adaptability process is faster and can work in complex environments. Our different approach in building and managing technology and large-scale transformation is the reality of today's business landscape.

We help our clients to ensure that digital transformation programs are established, well defined, set up and measured for success and executed effectively. This includes providing technology readiness assessments, program and project management support, project assurance and change management/enableness.

Our Service Offerings

Growth Consulting

Our specialised services around “Growth Consulting” helps companies to drive their growth and profitability through identifying new markets/clients, preparation of sales speech, participating in bidding process and to prepare the winning proposition

Cyber Security

An enterprise-wide security assessment aims to determine control weaknesses or gaps across people, processes and technology. We offer the following services as part of the Security Assessment service suite-

- Application, Web, Network, Wireless Network, Cloud Security
- GAP Assessment
- Vulnerability Assessment
- Penetration Testing
- Compliance Audit

Business Consulting

Cloud Services Advisory

We help organisations to get you moved to the cloud environment, discovering new and better ways to reveal the power of cloud computing and maximise the benefit from it.

Technology Strategy

We help plan and drive the end to end digital transformation journey by enhancing analytic capabilities, increase operational excellence through updated systems and enterprise wide architecture, and improve the delivery of products and services through proper future ready roadmap.

Emerging Technology

Our technology innovation capabilities can help clients to design a long-term vision through architecting the right solutions in the space of blockchain, artificial intelligence, augmented and virtual reality, and the internet of things.

We work with various organisations having complex application landscapes—with a mix of legacy systems, digital and SaaS. Our technology implementation services help organisations to reimagine their application landscape, with speed and agility, while continuously innovating to realize business value.

Application Development

This includes our capability in developing new and fresh business applications from scratch, upgrading the legacy systems into newer and relevant technologies

Managed Service

Our team of highly-skilled and trained professionals, combined with the use of the latest advancements in technology and process, offer end to end management and support of existing applications across organisations.

Staff Augmentation

We have a pool of technical professionals across various technologies and skill sets who can efficiently be augmented into the client's technical team and work as their integrated team member.

Technology Implementation

Digital Transformation Governance

A person with short dark hair, seen from the back, is looking at a wall covered in various design sketches, photos, and diagrams. The person is wearing a grey and black striped sweater. The wall is a corkboard or similar surface, densely packed with papers. Some papers show architectural drawings, others show photos of buildings or interiors, and some have handwritten notes. The overall scene suggests a creative or design workspace. A red semi-transparent overlay covers the bottom left corner of the image, containing the text 'Our Solutions'.

Our
Solutions

An open source
Government
Service
Delivery
Platform (SDP)

Our Solution E-Governance Service Delivery Platform

● E-Governance SDP

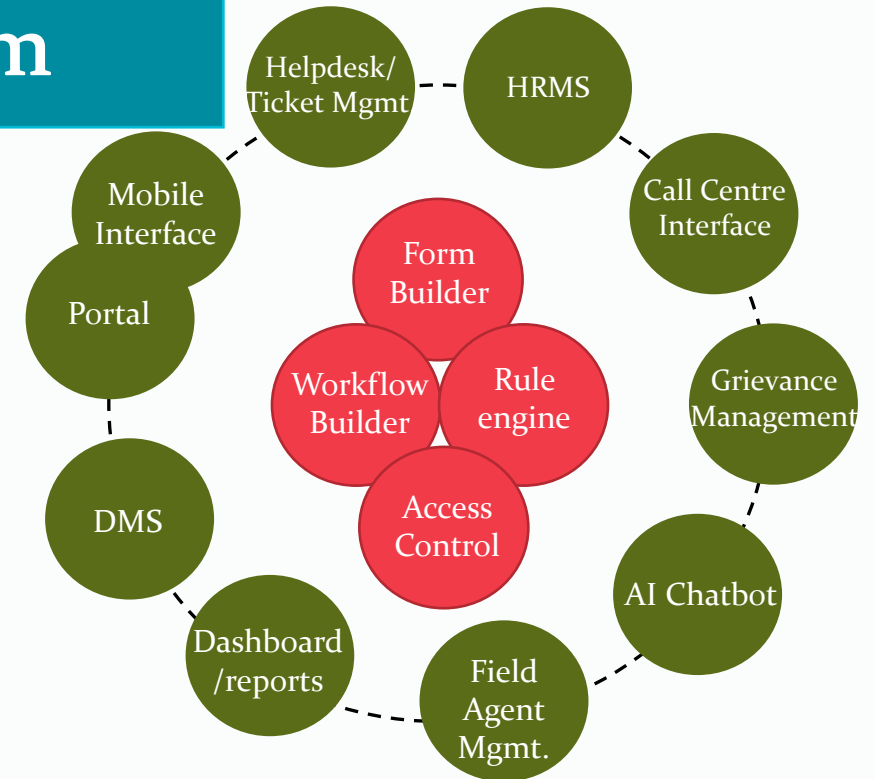

Our service delivery platform is built on an opensource technology. It is a low code platform where any G2C and G2B services can be configured and offered to the respective stakeholders without any coding. Presently this platform is in use by two major states in India to deliver more than 100 G2C and G2B services online. This platform has both the web and mobile interfaces for government users as well as the service receiving community. In addition to the core modules, it also has the modules like Call Centre interface, on-ground service delivery agent management and tracking etc.

The platform is designed to ensure seamless experience in terms of performance by handling data load and documents (through inbuilt DMS)

This platform has its own portal which can be used as the entry point for the users. The platform can also be integrated with any existing portal and can be used as the back-end system

This platform is designed with the following principles-

- **Interoperability** through APIs (APIs are available to consume/expose for any 3rd party integration)
- **Modular design**- Peripheral components like DMS, portal, field agent management system, chatbot, call centre interface etc. can be plugged in/out as per requirement
- **Scalability**- high volume of data, documents can be handled
- **Performance** is tested and tuned to cater large volume of user and transaction hits
- **Security**- Properly designed to resist cyber attacks/penetrations

Service Delivery Platform ready to use for any **government department, ministry, urban local bodies (e-Municipality Services)**. Configurable platform to set up any government services like domicile certificate, income certificate, birth/death certificate, any types of No Objection Certificate, property tax submission, water tax submission etc.

A platform for
**Building
Plan
Automation**

Our Solution

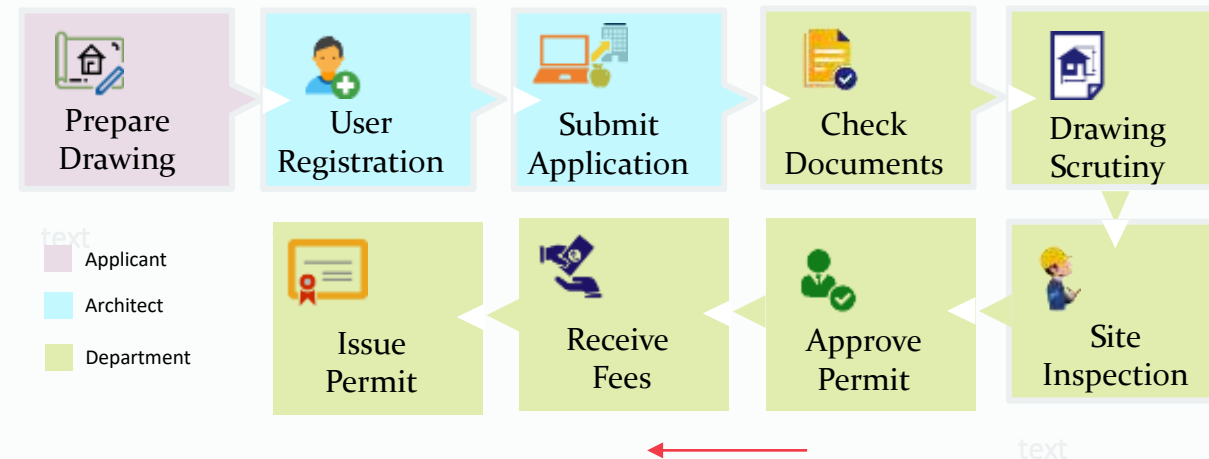

Building Plan Automation System

Automated Building Plan Approval System (ABPAS)

This platform enable Citizen Centric Building Plan Approval through Innovative Technology intervention

- Automating the Building plan Scrutiny process simplifies and significantly reduces the time and cost for all stakeholders.
- ABPAS system facilitates the transparency via functionalities like Citizen Search, file tracking, Intimation to consultant and official by SMS on every stage, Online payment system etc.
- System generates automatically the fee memo/ demand notes based on the submitted Building plan.
- Provision of Online submission of Inspection report through Mobile App: It is integrated with Mobile app for site inspections. The visiting building inspector is able to transfer the photograph along with documents through online mobile application.
- Under the Ease of doing business initiative the Common Application Form (CAF) and mandatory document check happens automatically.
- Tracking of ABPAS centrally level via MIS

ABPAS - Overall process flow

Web based system with

- ✓ Configurable workflow
- ✓ In-built DMS
- ✓ Collaboration platform
- ✓ Multi factor authentication
- ✓ Role based access control
- ✓ Secure audit trail
- ✓ API based integration
- ✓ Mobile solution

A platform for Blockchain based LRRM

Our Solution

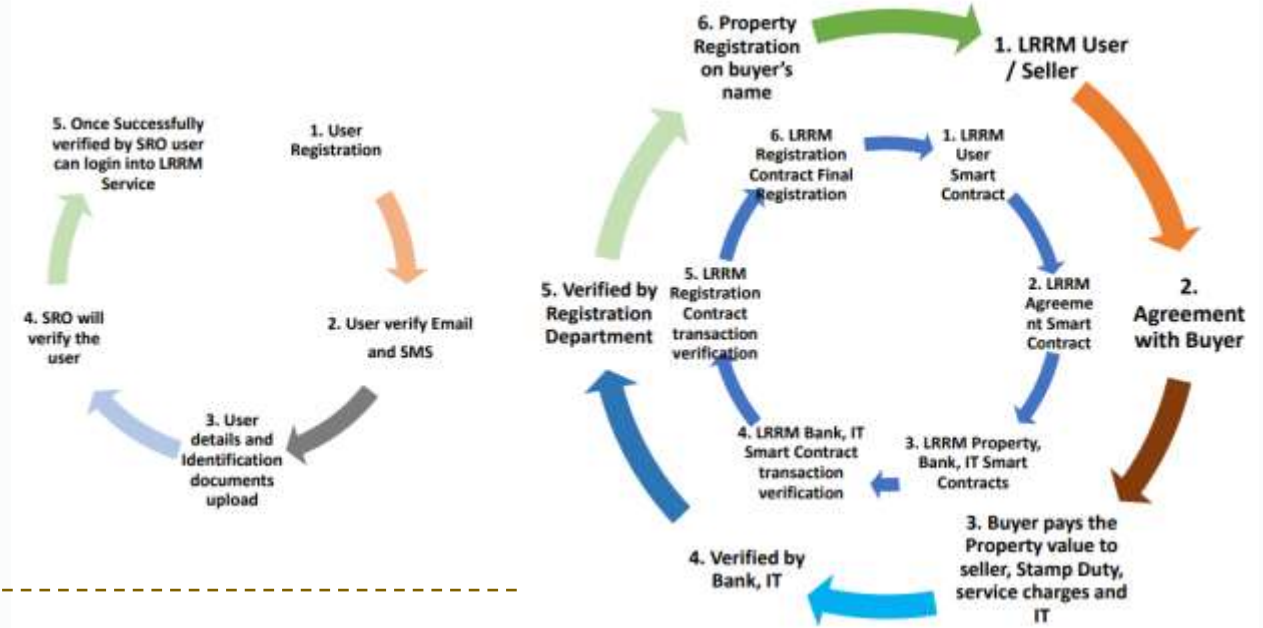

Land Registration and Record Management (LRRM) System

Blockchain based LRRM

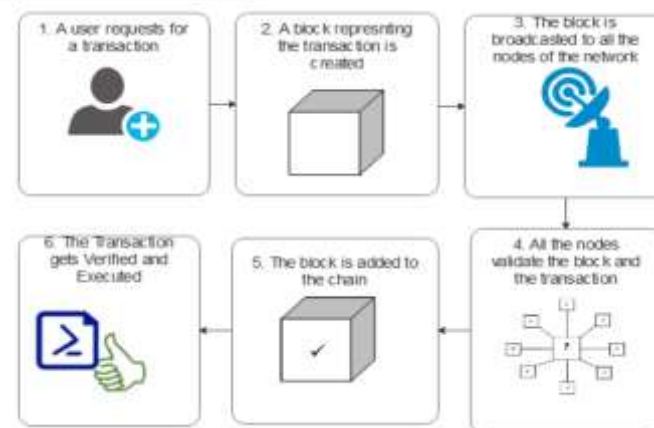

This is a platform to manage all the land records and any land related transaction on a Crypto SaaS platform that allows stakeholders to trust each other and seamlessly contribute data to the repository and audit records stored on the blockchain. It uses blockchain technology to ensure

- Trust
- Authenticity of Ownership
- Ownership history
- Traceable transactions
- Authenticated mutation records

High Level Process

Blockchain Workflow

A platform for
**Integrated
Health
Information
System**

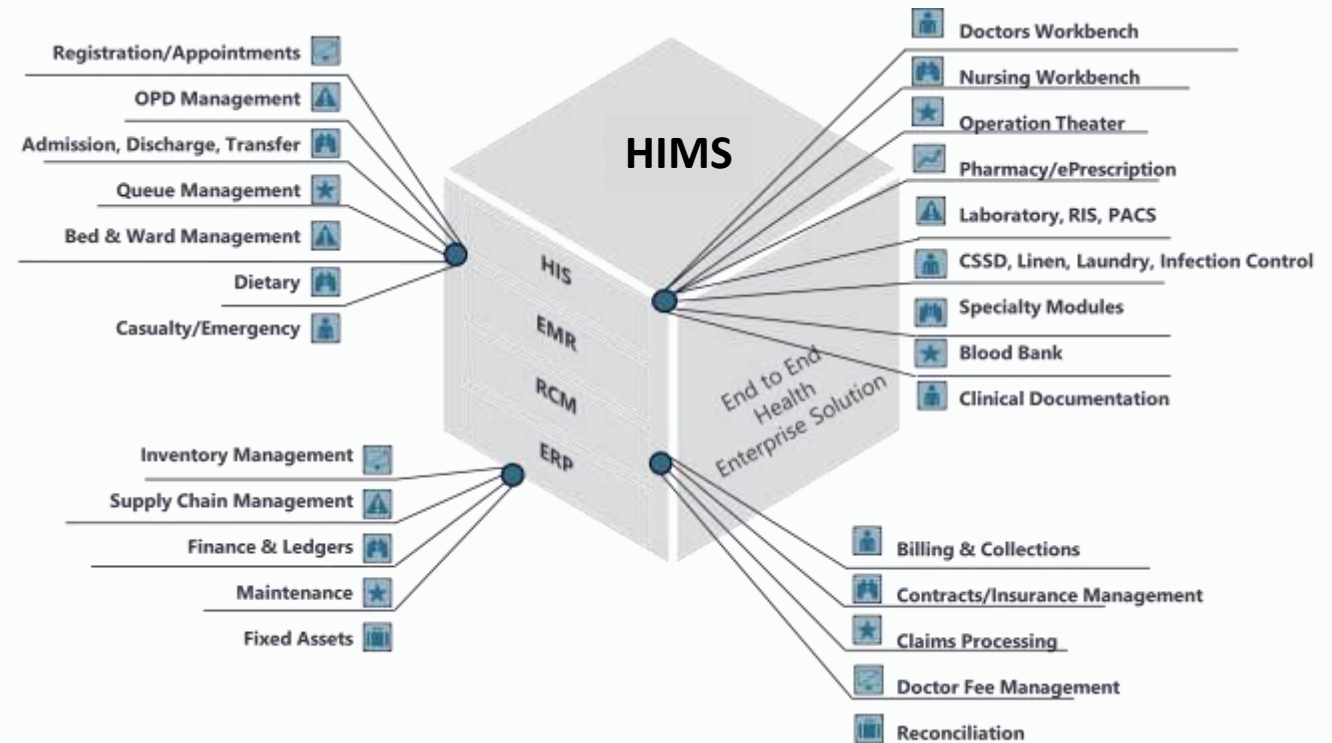

Our Solution

Integrated Health Information Management Platform

Integrated Health Information Management Platform

The Health Information Management (HIMS) platform, which is built on Microservice Architecture and API model. RHES is the robust, HIMS which is vertically deep and horizontally widespread Application and is most configurable to the context of any Hospital. The HIMS addresses complete Administration, Clinical, Billing and Back Office requirements of one or chain of Hospitals. This platform also takes care of the **National level Electronic Health Record (EHR) management**

- Fully Web-based solution deployed on private/public cloud
- Developed using Java Technology and Open Standard Highly Scalable Technologies
- User level Customization of Dashboards
- Multi-Tier application: The Layered design of the application offers flexibility towards changes
- Easy deployment: The application can be configured in a central server so that all the Client machines can access the same using internet browsers.
- Cost effective: Since the application is developed using open-source tools. The central deployment of the application reduces implementation costs without the need for Client-side implementation, saving both time and costs.
- Platform independent: The application can be deployed on any OS like Windows, Linux etc. Proposed OS is Linux.
- **Seamless Integration:** Different modules are integrated using HL7 & DICOM compliant ESB- Mirth/MULE/Apache Camel, which will also facilitate other external

Student & Learning management platform

Student & Learning Management

Our platform offers end to end student life cycle and eLearning platform for schools and higher education institute. Our platform includes:

- ✓ Admission
- ✓ Billing
- ✓ Operation
- ✓ Learning Management
- ✓ CMS
- ✓ Integration (with other systems)

The speciality of our platform includes the analytics for Students and Faculties.
Student Analytics: Help to identify the improvement areas and nurture the strength areas with the KPIs around academic records, interest areas, spending time on subjects, evaluation feedbacks, demographic info etc. Similarly for faculties platform helps to analyse, learning effectiveness based on feedback, discussion forum, collaborative learning, qualification, research work/publication etc.

Our Solution on Education Transformation

01

Admission module that allows easy onboarding of new students, configure discount plan, creation and maintenance of course masters and workflow based approval fulfillment

Registration	Document Upload	Discount plan	Payment	Scholarship Exams	Application ID
Admissions	School Master	Approval Workflow	Course Master	Personal Details	Bulk Upload

Billing module with provision for fee and discount setup and allows partial payments, refunds, transaction tracking facility along with receipt generation

Billing	Discount Setup	Receipting + GST	EMI Integrations	Partial Payment	Payment Status
Fee Setup	Payment Mode	Refunds	Coupon Module	Fee Recalculation	Track Transactions

Operation module which allows for efficient student data along with attendance capture, automatic time table generation for student and teacher and automatic notification feature

User Management	Student Time Table	Faculty Time Table	Batch Creation	Exam Scores	Stock Issuance
Student Transfer	Student Attendance	Faculty Feedback	Class Roster	Exam Schedules	Notifications

02

Learning management having integrated features such as course creation, course assignment, training view, adaptive quizzes and gamification etc. in the portal

Self-learning	Chat	Course Creation	Adaptive Quizzes	Micro-Content	Content Sharing
Assignments	Discussion Forums	Survey/Poll	Gamifications	Social Engagement	Content Feedback

03

A Content management system that provides the capability of content collaboration, content sharing, manage and publish content with proper versioning

04

An enterprise integration platform which helps in seamless communication between all peripheral systems like SMS, LMS, MN, CRM, Score Tool, Finance etc.

05

A workflow engine includes mapping out the workflow in an ideal state, finding redundant tasks, automating the process, and identifying bottlenecks or areas for improvement

06

Rule engine module for AESL management for setup and calculate complex discount process to cater the current business needs and also provision to incorporate new features in near future

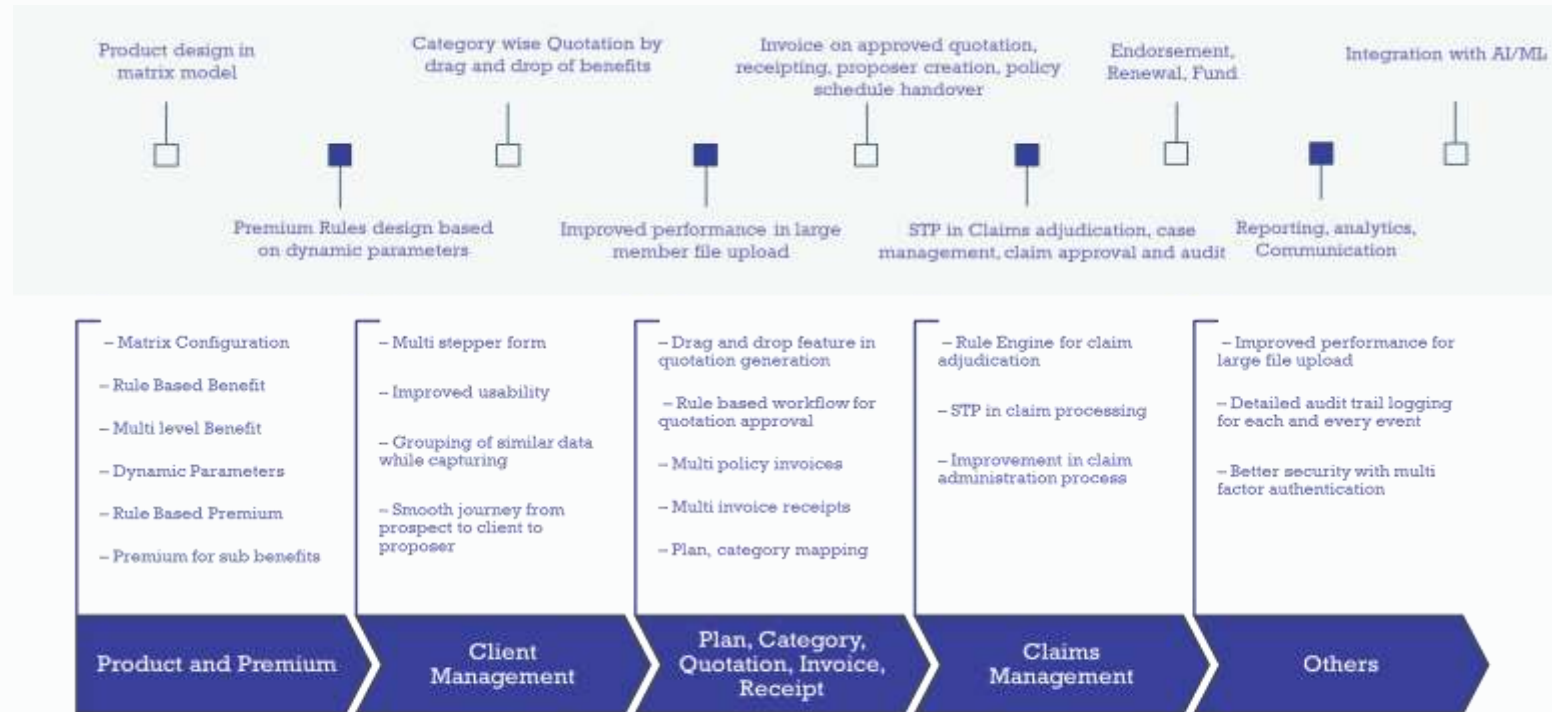

A platform for Health Insurance & Claim Adjudication

Smart Health & AI based Claim Adjudication

This platform enable Health Insurance provider to

- Configure the products and plans as per national guidelines
- Patient, Provider and Payer onboarding in single platform
- AI based Claim adjudication and fraud analytics.
- Automated workflow for underwriting, claim processing and payment
- Ready platform for market place feature for insurance selling web platform and user journey enabler
- Tracking of portfolio, claims centrally

Our Solution Smart Health Insurance

Web based system with

- ✓ Configurable workflow
- ✓ In-built AI platform
- ✓ Micro Service
- ✓ Multi factor authentication
- ✓ Role based access control
- ✓ Secure audit trail
- ✓ API based integration
- ✓ Mobile solution

At a Glance To Important Features

A single integrated HR platform with consistent and standardized HR processes focused on the entire workforce developed with open source platform can quickly integrated with other solution.

Solution benefits

- individualised, relevant, and meaningful talent experiences.
- True self-service to support automation, improve data quality, and elevate HR service delivery with real-time processes.
- Provide flexible programs to meet specific benefit requirements.
- Scalable over time and changing business situation.
- Identification of risks and opportunities related to your workforce so you can quickly take action.

Business value

- Make faster, more informed decisions based on data-driven insight across all HR processes
- Increase productivity and simplify everyday transactions with self-services that keep workers engaged, connected, and informed
- Streamline hiring activities with automated, centrally managed global processes
- Ensure process harmonisation across your business and improve organisational results.
- Control your expenditure over HR system.

Our Solution

Integrated Human Resource Management System

Increased HR Efficiency with elimination of manual work

On Premise, Cloud & Mobile App for HR on the Move

Advanced Security Levels for complete Data Security

Highly configurable modules for easy customization

Intelligent Resume Parsing for automated extraction & storage of resumes

Seamless Integration with any Time & Attendance system

Employee Self Service for reduced dependency on HR

Dynamic workflows & role-based access

Geofencing for automated attendance tracking

Automated HR functions for complete management of employee lifecycle

Multi entities & multi location feature in one application

Transparency with employee activities

CRM empowers your organization to deliver great customer service experiences and automate your organization's Sales and Marketing Operations.

Convert Opportunities into Revenue

CRM provides you with all the tools to capture important leads and manage your opportunities. Mark lead as won or lost and view live records on dashboard.

Manage Interaction

Activities Management

Activities are used to keep track of various sales activities like meetings, calls and notes. View all activities in the activities section and avoid missing out on opportunities. Add or delete activities and view real time insight on the dashboard.

Product Creation

Manage all products and services your company offers and keep track of what you sell and add value to your leads. Track which products and services are doing well with customers and where sales are lost.

CRM Dashboard

View new records as it happened with a real time dashboard. Quickly view your leads, activities, customers and product with an intuitive dashboard.

Our Solution

Customer Relation Management (CRM) System

An open source
Legal case
managing
platform

● Legal Assistant

LA is a solution which helps Lay firms and or individual lawyers to have a one centralised platform for end to end process flow from case management, client management, Financing, time keeper management , notification and compliance

- Organization specific legal Process configurable.
- One Stop dashboard for all activity.
- Extendable to end clients to get first hand view case history.
- Opensource platform.
- Mobile solution for easy touch base.

Our Product Incubation

An open source
Market
Place &
Collaboratio
n platform for
any industry

Market Place

The Mobile app extend a platform to buyer and seller to come in a single platform to showcase products and accepts buyers request with chat and audio/video calling facility

- Opensource audio and video calling feature in mobile app along with chat feature without any license cost for any number of users
- Configurable and easily implementation for PPP platform users, MSME sectors etc..
- Data analysis and representation.
- Opensource platform.
- Cloud based model.
- Integrated with AdMob for more revenue generation mechanism

A platform to
conduct
training and
survey for
large userbase

QsurveySuite

QSurvey Suite is a industry agnaustic configurable online and guided training, survey, Reward and Recognition and certification mobile platform which can be used by large pool of users in any industry

- Configurable for any industry segment and rollout quickly
- Interactive user platform enabled with color codes for multiple users in single device for better coverage
- Data analysis and representation for management
- Opensource platform.
- Cloud based platform.

A man in a dark suit and white shirt is holding a small, red, cube-shaped object with a logo on it. The background is dark, and the man's hands are the central focus. The red cube has a white logo on its top face. The man's suit jacket has a pocket square visible. The overall image has a professional and sophisticated feel.

Our Offerings

Cloud Strategy and Policy

Adoption of cloud
in Banking parlance
requires in depth
analysis and
assessment and
formation of tight
policy
implementation to
avoid regulatory
compliance

THE CLOUD POLICY DOCUMENT

The final document will have all the controls associated with the Cloud Policy neatly defined. All such controls should be validated by the Bank IT team as well as by the Information Security team.

COMPENSATORY CONTROLS

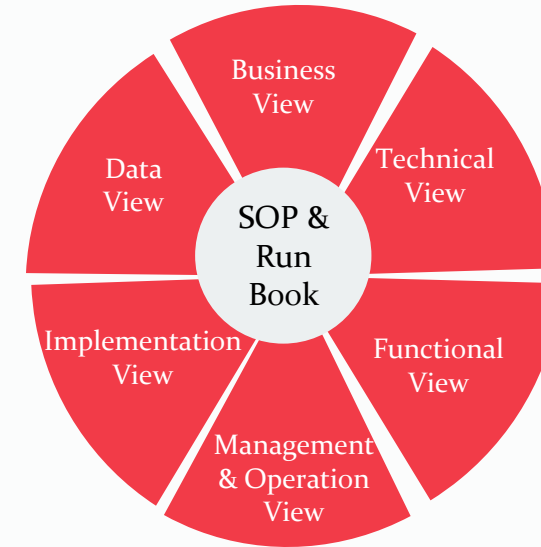

In case of any deviations from the standard set of controls suggested by us is difficult to implement in the Bank for various reasons, we shall propose compensatory controls. Appropriate risks will be highlighted which the Core Group or the Board may decide to accept and continue with the business.

SIGN-OFF

Once the Cloud Policy is accepted by the Board of the Bank, the document will be automatically signed-off. Post which the Procedures will be developed and implemented

Cloud Strategy and Policy

In order to make the DC DR compliant with Governing Bank guidelines and other necessary compliances, Banks intend to develop comprehensive SOP and automate the runbook for DC DR

Analyse DC DR Process Boundary

Finalisation of Run Book Design

Run Book QA and Mock Drill

Solution Deployment

Support and Handholding

Blended Managed Services

Staff/Team Augmentation

We hire the best resources from the Indian market who will be providing quality output at par with international standards. Our hand-picked resources will be trained and tailored to customize outputs as per client requirements in various technical domain

Our expertise in wide range of technology (Open Source, Microsoft Technologies) and innovative approach to solving business problems through technological intervention will enable us to combine technology and manage services, thus providing a robust blended approach to solving client's business problems

OUTSOURCING of HUMAN-INTENSIVE WORK: Non-core functions/activities of business verticals can be outsourced to offshore locations at same quality delivery but cheaper cost

We help our client
to manage their IT
Operation
effectively and
efficiently

We deliver

QUALITY OUTPUT THROUGH THE FOLLOWING PROCESS

- ☐ Standardized, systematic and simplified approach
- ☐ Daily/Weekly & Monthly Progress Reports
- ☐ Lean Approach to solving business cases
- ☐ Remote Stakeholder Management across verticals/businesses

BENEFIT TO CLIENT

- ☐ Cost optimisation
- ☐ Infra optimisation
- ☐ Resources optimisation
